Education

Northeastern University Jan. 2024 – Dec. 2026
Master of Science in Computer Science Boston, MA
Relevant Coursework: Scalable Distributed Systems, Algorithms, Database Systems, Artificial Intelligence

University of Pennsylvania Aug. 2018 – May 2019
Master of Urban Spatial Analytics Philadelphia, PA

Professional Skills

Languages: Python, TypeScript, JavaScript, Java, C++, SQL, HTML, CSS
AI & Automation: OpenAI/Anthropic APIs, AWS Bedrock, Prompt Engineering, Agentic AI, Claude Code, Codex
Frameworks & Backend: React, Next.js, Node.js, FastAPI, Spring Boot, RESTful APIs, Angular
Databases & Tools: PostgreSQL, MySQL, MongoDB, Firebase, Supabase, Git, GitHub Actions, CI/CD, Docker

Professional Experience

Intellilake, Inc. Jun. 2026 – Sep. 2026
Software Engineer Intern Boston, MA

- Modernized a legacy internal asset-management tool by migrating standalone HTML/iframe workflows into the main product using React and TypeScript, rebuilding browsing, filtering, selection, and governance as reusable components.
- Redesigned a collapsible workspace layout across 5 nested React containers, consolidating 8 Zustand state fields into 1 and adding 20 regression tests while enabling full-width hover targets and eliminating stuck-state and hover-scoping bugs.
- Built a shared image asset workflow via APIs and S3, standardizing asset resolution for 12 UI views and components and replacing 30 duplicated resolution paths to reduce maintenance overhead and ensure consistent rendering.
- Synchronized light/dark theme state between the host application and nested interface, consolidating 2 theme handlers into 1 shared flow to eliminate styling mismatches while maintaining ∼25 ms median interaction processing.
- Co-developed a modular conversation-history drawer for the product's AI agent, adding search, session switching, and new-chat flows while contributing to the replacement of a 1,200+ line legacy chat component.

Blinkle AI Jun. 2025 – May 2026
Software Engineer Intern Boston, MA

- Developed an 8-step AI-powered onboarding workflow with React, Node.js, TypeScript, and AWS Bedrock, transforming user input into structured resume-ready outputs through automated LLM pipelines, reducing manual editing efforts.
- Designed a PostgreSQL JSONB-based resume schema consolidating 9 logical data entities into a single-query retrieval flow, eliminating the need for multi-table joins and achieving 6ms resume retrieval latency across persisted sessions.
- Shipped a React-based Chrome extension automating data entry across 10 job platforms using field mapping and Shadow DOM, auto-populating up to 25 fields per submission and cutting entry time from 2 minutes to under 20 seconds.
- Engineered Stripe payment and credit billing workflows across 3 pricing tiers using REST APIs, webhooks, PostgreSQL ledgers, and row-level locking, preventing duplicate transactions and ensuring balance integrity under concurrent usage.

Accenture Mar. 2021 – Jun. 2022
Technology Consultant Shanghai, China

- Co-developed a healthcare data integration pipeline for a pharmaceutical client, mapping HL7v2 and ASTM inputs into normalized JSON payloads and publishing records to 3 systems through REST APIs, enabling real-time data access.
- Refactored metric definitions, field mappings and aggregation logic across 30+ analysis views for a million-user membership platform through iterative cycles based on stakeholder feedback, improving clarity for reporting workflows.

Projects

Cryptids Field Guide: Map-Based Discovery Platform Sep. 2025 – May 2026

- Built a full-stack map platform with React, TypeScript, NestJS, Supabase, and PostgreSQL, supporting 3-tier role-based access control and a 4-state moderation workflow across 85+ records, enabling scalable user content management.
- Structured GraphQL-backed discovery services with queries, pagination, and indexed data access, reducing refresh latency by 70% through parallelized auth and data fetches while maintaining Lighthouse 95, 0.4s FCP, and 103ms INP.

NexCart: E-Commerce Platform Aug. 2025 – Apr. 2026

- Built a full-stack platform with Angular, Java, Spring Boot, and MySQL, developing 10+ RESTful APIs for browsing, checkout, and authentication, with GitHub Actions and JaCoCo enforcing 70% test coverage across 4 core classes in CI.
- Built an 8-table MySQL schema with Auth0 OAuth2/JWT auth, and integrated a Claude-powered shopping assistant via a Spring Boot REST proxy for product recommendations, cutting response time from 3–5s to 1.5s.
